

# Welcome!

COMP2521 25T3  
Data Structures and Algorithms

# COMP2521 25T3

## Introduction

Sim Mautner

`cs2521@cse.unsw.edu.au`

course introduction  
tools of the trade

## Introduction

### Outline

#### People

#### Teaching

#### Assessment

#### Resources

#### Resources

#### Expectations

#### Advice

#### Acknowledgements

## Tools

to get you thinking like a *computer scientist*  
not just a programmer

- know and understand *fundamental* data structures, algorithms
- reason about *applicability* + *effectiveness*
- analyse behaviour/correctness of programs

## Introduction

### Outline

#### People

#### Teaching

#### Assessment

#### Resources

#### Resources

#### Expectations

#### Advice

#### Acknowledgements

## Tools

We assume that you can:

- Produce a correct C program from a specification
- Use fundamental control structures (sequence, selection (`i f`), iteration (`whi le`))
- Use fundamental C data types and data structures (`char`, `i nt`, `double`, arrays, structs, pointers, linked lists)

## Introduction

## Tools

In this course, you will learn:

- data structures: trees, graphs, hash tables, tries
- data structure/algorithm analysis: time/space complexity
- sorting and searching techniques
- graph algorithms

## Introduction

## Outline

## Teaching

## Assessment

## Resources

## Resources

## Expectations

## Advice

## Acknowledgements

## Tools

By the end of this course, you should be able to:

- Implement solutions to a wider range of problems
- Analyse performance characteristics of algorithms
- Analyse performance characteristics of data structures
- Make decisions about appropriate data structures and algorithms

### Four hours of lectures per week

- Monday 14:00–16:00; Wednesday 11:00–13:00
  - In person in E19 Patricia O'Shane 104
  - Also livestreamed via YouTube
  - Link to livestream on the lectures page
  - Feel free to ask questions in the chat
  - Recordings will be on YouTube
- present a brief overview of theory
- demonstrate problem-solving methods
- give practical demonstrations

## Introduction

## Tools

## Weekly one-hour tutorials

- tutorials start in week 1
  - run every week, except flex week
  - online classes are via Blackboard Collaborate
- tutorials clarify lecture material
- work through problems related to lecture topics
- questions available (usually) the week before
- answers available Friday evening

## To get the best out of tutorials

- read and attempt the problems yourself beforehand
- don't keep quiet in tutorials... talk, discuss, ...
- ask if you don't understand something

## Introduction

Outline

People

Teaching

Assessment

Resources

Resources

Expectations

## Tools

Each tutorial is followed by a two-hour lab class

- several exercises, mostly small implementation/analysis tasks
- aim to improve your coding and analysis skills
- give you experience applying algorithms and techniques
- done individually, unless specified
- submitted via `give`, before Monday ~~17:00~~ 09:00 the following week
- many labs have a handmarking component (see spec for details)
  - handmarking completed by showing your work to your tutor in the lab **within two weeks of the lab**
- worth 15% of your final mark, best 7 of 8 labs used to calculate the 15%

### Weekly quizzes

- on WebCMS
- questions about previous week's lectures
- different kinds of questions
  - multiple choice, multiple select, fill-in-the-blank...
- aim to test your knowledge and understanding of the theory
- done individually
- due Monday 17:00 09:00 the following week
- can submit multiple times, only last submission is marked
- worth 10% of your final mark, best 7 of 8 quizzes used to calculate the 10%

## Introduction

## Tools

## Two assignments

- each worth 15% of your final mark
- give you experience applying algorithms to larger problems
- done individually
- help sessions will be available to assist with assignments
  - will be very busy in the last days before an assignment is due

## Introduction

Labs, quizzes and assignments all have the same late penalty

- UNSW standard late penalty
- **0.2%** of the maximum mark taken from your raw mark for each hour late
  - equivalent to 4.8% per day
- submissions later than 5 days not allowed (automatically enforced)

## Introduction

Outline

People

Teaching

Assessment

Resources

Resources

## Tools

Due to the UNSW standard late penalty allowing late submissions up to 5 days after the deadline, along with extensions for special consideration:

- sample solutions for labs will be released 12 days after the due date
- marks for labs will be released a week after the due date
- answers and marks for quizzes will be released 5 days after the due date
- sample solutions for assignments are not released
- marks for assignments are released in two parts
  - automarking will be released a week after the due date
  - handmarking (style, automarking adjustments) takes longer and will be released 2 weeks after the automarking

## Tools

- 3 hour in-person exam, during exam period
- Limited resources provided
- Two sections:
  - Theory - short-answer questions
  - Programming - programming questions
- To pass the exam hurdle, you must:
  - score at least 18/45 (40%) on the final exam
  - score at least 25% in the theory section of the exam
  - score at least 25% in the programming section of the exam

## Tools

- Labs, quizzes and assignments must be entirely your own work
- Plagiarism will be checked for and penalised
- Plagiarism may result in suspension from UNSW
- Scholarship students may lose their scholarship
- International students may lose their visa
- Supplying your work to any other person may result in loss of all your marks for the lab/assignment

### Tools

- Use of generative AI tools, e.g., GitHub Copilot, ChatGPT, with the intention of generating answers/solutions for assessment tasks is not permitted
- Use of generative AI tools for learning is permitted
  - You must still be critical of any response you get from these tools
- Generative AI tools have great potential to assist coders, but use of them requires good understanding of the language/system

Assessment

Resources

Resources

Expectations

Advice

Acknowledgements

## Tools

- Check your email regularly
  - Announcements will be sent to your email
  - Your tutor will send you emails
  - Reminders of unsubmitted work will be sent to your email
- Read the spec before asking questions
  - Don't ask questions that are already answered in the spec
- Attempt to debug your program yourself before asking for help
  - Debugging may involve **adding print statements** or using **gdb** to check the state of the program at various points, or **drawing diagrams** to visualise the program's execution

## Introduction

## Tools

- Keep up with lectures  
Labs and quizzes require you to know content from recent lectures
- Attend tutorials, *especially* if you are falling behind  
Tutors will not judge you for falling behind
- Always try to *understand*, instead of just memorise  
Understanding something makes it easier to remember  
Exam questions will be different from what you've seen
- Programming is a skill that improves with practice  
The more you practice, the easier labs, assignments and the exam will be

# The Tools of the Trade

## Introduction

## Tools

### Compilation

Sanitizers

valgrind

make

**`dcc -o prog prog.c`**

**`clang -Wall -Werror -g  
-fsanitize=address,leak,undefined  
-o prog prog.c`**

COMP2521 uses the clang compiler. Basic compilation command:

```
clang -Wall -Werror -g -o prog prog.c
```

COMP2521 uses the clang compiler. Basic compilation command:

```
clang -Wall -Werror -g -o prog prog.c
```

- `-Wall` enables (almost) all warnings
  - Catches many possible syntax errors

COMP2521 uses the clang compiler. Basic compilation command:

```
clang -Wall -Werror -g -o prog prog.c
```

- `-Wall` enables (almost) all warnings
  - Catches many possible syntax errors
- `-Werror` turns warnings into errors
  - Prevents compilation if there are warnings

COMP2521 uses the clang compiler. Basic compilation command:

```
clang -Wall -Werror -g -o prog prog.c
```

- `-Wall` enables (almost) all warnings
  - Catches many possible syntax errors
- `-Werror` turns warnings into errors
  - Prevents compilation if there are warnings
- `-g` preserves information useful for debugging
  - Line numbers, function and variable names, etc.

## Introduction

## Tools

## Compilation

## Sanitizers

## valgrind

## make

{Address, Leak, Memory, Thread, DataFlow, UndefinedBehavior}Sanitizer

a family of compiler plugins, developed by Google  
which instrument executing code with sanity checks  
use-after-free, array overruns, value overflows, uninitialised values, and more

you've been using ASan+UBSan already: *dcc* uses them!  
usable on your own \*nix systems (Linuxes, BSDs, 'macOS') too!

### Introduction

### Tools

Compilation

Sanitizers

valgrind

make

- Detects invalid memory accesses, such as:
  - Out-of-bounds array accesses
  - Use-after-free errors
  - Double-free errors
  - ...and many others
- To use AddressSanitizer, compile with `-fsanitize=address`
  - Our Makefiles compile with AddressSanitizer by default

## Introduction

## Tools

Compilation

Sanitizers

valgrind

make

```
#include <stdio.h>
```

```
#define SIZE 5
```

```
int main(void) {  
    int arr[SIZE];  
    int i = 0;  
    while (scanf("%d", &arr[i]) == 1) {  
        i++;  
    }  
    ...  
}
```

## Introduction

## Tools

Compilation

Sanitizers

valgrind

make

```
=====
==2848814==ERROR: AddressSanitizer: stack-buffer-overflow on address 0x7ffc9a6b8b74
at pc 0x00000043ab36 bp 0x7ffc9a6b8a00 sp 0x7ffc9a6b8180

Address 0x7ffc9a6b8b74 is located in stack of thread T0 at offset 52 in frame
    #0 0x4c7f5f in main /import/glass/2/.../asan.c:6

This frame has 1 object(s):
  [32, 52) 'arr' (line 7) <== Memory access at offset 52 overflows this variable
HINT: this may be a false positive if your program uses some custom stack unwind mec
hanism, swapcontext or vfork
      (longjmp and C++ exceptions *are* supported)
SUMMARY: AddressSanitizer: stack-buffer-overflow (/import/glass/2/.../asan+0x43ab35)
in scanf_common(void*, int, bool, char const*, __va_list_tag*)
```

## Introduction

## Tools

## Compilation

## Sanitizers

## valgrind

## make

- Detects memory leaks
- To use LeakSanitizer, compile with `-fsanitize=leak`
- Example of error that would be caught by LeakSanitizer:

```
#include <stdlib.h>
```

```
int main(void) {  
    int *a = malloc(sizeof(int));  
    *a = 42;  
    // free(a);  
}
```

## Introduction

## Tools

## Compilation

## Sanitizers

## valgrind

## make

- Detects uninitialized memory access
- To use MemorySanitizer, compile with `-fsanitize=memory`
- Example of error that would be caught by MemorySanitizer:

```
#include <stdio.h>
```

```
int main(void) {  
    int arr[10];  
    arr[0] = 42;  
    if (arr[1] == 0) {  
        printf("zero\n");  
    }  
}
```

## Introduction

## Tools

Compilation

Sanitizers

valgrind

make

- Detects wide range of undefined behaviours
- To use UndefinedBehaviorSanitizer, compile with `-fsanitize=undefined`
- Example of error that would be caught by UndefinedBehaviorSanitizer:

```
#include <limits.h>
#include <stdio.h>

int main(void) {
    int a = INT_MAX;
    printf("%d\n", a + 1);
}
```

## Introduction

## Tools

Compilation

Sanitizers

valgrind

make

- finding memory leaks
  - ... not free'ing memory that you malloc'd
- finding memory errors
  - ... illegally trying access memory

```
$ valgrind ./prog
```

```
...
```

```
==29601== HEAP SUMMARY:
```

```
==29601==      in use at exit: 64 bytes in 1 blocks
```

```
==29601==    total heap usage: 1 allocs, 0 frees, 64 bytes allocated
```

```
==29601==
```

```
==29601== LEAK SUMMARY:
```

```
==29601==    definitely lost: 64 bytes in 1 blocks
```

Valgrind doesn't play well with ASan. Compile without ASan if you want to use it.

## Introduction

## Tools

Compilation

Sanitizers

valgrind

make

Can't be bothered typing long compilation commands?

**make** lets you specify  
*rules, dependencies, variables*  
in a Makefile

to define what a program needs to be compiled

With a Makefile, all you need to do to compile is to type  
make
